

Specific solutions

BUILD UP provides specific solutions for specific audiences:

www.buildup.eu

Building professionals

Are you keen to improve your skills about energy efficiency in buildings and learn more about the latest information on energy legislation?

BUILD UP enables you to interact with others and to access:

- The latest news and events in the field
- A database of resources, guidelines and tools
- A database of case histories.

Public authorities

Are you responsible for energy issues?

BUILD UP offers you access to:

- Many resources on the Energy Performance of Buildings Directive
- Toolkits and guidelines produced by other cities, regions or countries
- A way to share expertise with your peers.

Umbrella organisations

Are you interested in energy-saving in buildings?
Are you keen to tell others of your activities and share your successes?

BUILD UP will increase your visibility as it allows you to:

- Announce news
- Share library resources – such as guidelines and best practices
- Propose events
- Submit successful cases.

Moreover, if you want to improve services to your members, BUILD UP enables you to launch a thematic virtual community. The members of this open forum will then be able to view the most relevant cases, news, documents or events that you will have selected for them.

Building occupants

Do you want to improve the energy efficiency of your home?

BUILD UP will provide you access to all the information you need to help you reduce your energy consumption. You will find:

- Some practical examples of energy-saving measures
- Factual information and links about legislation in your own country or region.

BUILD UP, the European portal for energy efficiency in buildings

BUILD UP serves the needs of building professionals, public authorities and occupants alike. The key aim is to reduce the energy consumption of buildings across Europe by transferring best practices to the market and fostering their uptake. BUILD UP will also keep you updated about EU energy policy for buildings.

www.buildup.eu

BUILD UP Europe's collective intelligence

Bringing together new practitioners and professional associations while motivating them to change their working practices, by stimulating knowledge and the transfer of tools, best practices and resources.

Informing and forging links between local/regional/national authorities, energy agencies or non-governmental organisations.

Encouraging building occupants – both property owners and tenants – to improve the energy performance of their buildings and to use energy more rationally.

Buildings consume more energy than any other sector of the European economy. It is recognised that they account for around 40% of energy consumption. The building sector therefore offers the largest potential for energy savings, which in turn will reduce our negative impact on the environment.

In 2009, the European Commission has launched its BUILD UP initiative to increase the awareness of all parties in the building chain of the saving potential which remains untapped. BUILD UP will promote better and smarter buildings across Europe by connecting building professionals, local authorities and citizens. Its interactive web portal will catalyse and release Europe's collective intelligence for an effective implementation of energy-saving measures in buildings.

The BUILD UP web portal will share and promote existing knowledge, guidelines, tools and best practices for energy-saving measures in buildings across Europe. At the same time, it will inform and update the market about the legislative framework in terms of goals, practical implications and future revisions.
